

Dear Emma,

Thank you for sending the Implementation Update through to me.

The document looks great and can see there has been a lot of effort put into this – well done!

I only have one suggestion and that is:

Recommendation 4: Voluntary online labelling, with cabinet efficiency characteristics provided in a standardised star rating format.1

1 The transition to a star rating system would require an algorithm (developed by regulators), to be published prior to implementation of the new efficiency levels.

I am opposed to the Star Rating system as I believe it is too similar to the domestic star rating. My proposition is to remain with the current European alphabet system – seeing as we have already agreed upon adopting their EU Standards, test methods and EC efficiency (EEL/MEPS) levels for Refrigerated storage cabinets and counters for professional use (EN 16825). This is further supported by the fact that there are so many suppliers of European refrigerated equipment into Australia & New Zealand with compliance testing and labelling already completed.

I am happy to discuss this further if you require.

Kind regards,

CRAIG
