Kingloc Submission

Attn: **Lisa Sinclair**

Project Manager – Efficient Products

- 1) Kingloc agree with alignment of the standard to the EU proposed standards.
(Your proposed main changes option 4 preferred).

- 2) Kingloc would like to ensure that proposed actions to target a percentage of each Meps category in order to improve performance carefully considers product segments like upright cabinets.
This is in respect to work already carried out with models to reduce energy consumption in products supplied to the General trade .
The major purchasers of these cabinets are mainly global
Organizations with highly developed global standards for energy consumption
30% of the bottom ranked units may already be well within the new EU standards.
Please note in this category some 200,000 pieces of equipment across major corporates are active in the market today.

- 3) Labelling proposal with energy rating symbols like domestic refrigeration would in our opinion not be effective as the decision to purchase is taken by the owner who as per point 1 is usually a large global company.
These companies have highly developed corporate policies around reduction of energy built into their buying programs and dictate to the local management the products that align with global policy.

- 4) Kingloc would like to nominate for the standards/technical working group.

Regards

Dean Brown
